Application/Control Number: 09/883,976

Art Unit: 2124

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 9 is rejected under 35 U.S.C. 102(b) as being anticipated by Freidin '584.

Freidin '584 teaches the claimed combination. Freidin discloses a programmable logic device comprising a function cell (Fig. 3) that provide a result logic value in response to one or more input logic values and a function vector both from a configuration memory (see Fig. 7, signals 280 "29a"; col. 12, line 64+) and from dynamic configuration signal (see Fig. 7, signal 285 "29b").

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Freidin '377.

Freidin discloses a programmable logic device comprising a function cell (Fig. 3) that provide a result logic value (see X, Y in Fig. 3) in response to one or more input logic values (see C0-7 in Fig. 7) and a function vector (see S1 in Fig. 3) where the function cell performs a function set by the function vector or a default logical

Art Unit: 2124

combination function (NOR, XOR, NAND, AND, XNOR or OR) set by S1. It is noted that Freidin does not disclose the function cell having an arithmetic logic circuit including an ad, a subtract, an increment, and a decrement operation that provides the result logic value as an arithmetic combination of input logic values and a carry out in response to the input logic values, the function vector and a carry input. However, it is well known in the art that the arithmetic logic circuit is one type of functions that a typical logic block performs based on the configuration. Therefore, it would have been obvious to a person having ordinary skill in the art at the time the invention was made to use the logic block of Freidin for arithmetic function since such a modification is an engineering design choice. Further it is inherent that an arithmetic logic function is also a logical combination function.

3. This is a Continuation of applicant's earlier Application No. 09/475,400. All claims are drawn to the same invention claimed in the earlier application and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the earlier application. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action in this case. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

Application/Control Number: 09/883,976

Art Unit: 2124

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no, however, event will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tan V. Mai whose telephone number is (703) 305-9761. The examiner can normally be reached on Tue-Fri from 6:30am to 5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kakali Chaki, can be reached on (703) 305-9662. The fax phone numbers for the organization where this application or proceeding is assigned are:

A & C 1	(700) 740 7000
After-final	(703) 746-7238

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 305-3900.
